

How to write .188 as a fraction?

👤 100celebrities 🕒 2023.03.24 14:35 👁 조회 수 : 1

This can be regarded as a frequently asked question among many students these days. Conversions of this type are commonly observed in the examinations of children studying in primary school. Here, we will be discussing how to write [.188 as a fraction](#). In the case of adults, these conversions can be regarded as extremely easy and they might even complete it within seconds. But in the case of the small children, these conversions can be regarded as quite confusing. Hence, the teachers and the adults who are involved in teaching the students these types of conversions, should ensure that they are breaking the entire conversion process into simple steps. Thereafter, they should explain each step to the students in detail. This will help the students in understanding the conversions clearly without any doubt. It will also help them to develop a clear concept regarding these questions. So, without further delay, let's get into our discussion of this important question.

Removal of the decimal point

This can be regarded as the first and foremost step that needs to be carried out in order to write .188 as a fraction. For removing the decimal point, we need to add zeros after 1 in the denominator. The number of zeros that we have to add is equal to the number of decimal places that are present in the given decimal number. In this case, the given decimal number is 0.188. As we can see, this decimal number has three decimal places in it. So, we need to put three zeros after 1 in the denominator. This will give us the fraction, 188/1000. Thus, this can be regarded as the completion of the first step of the conversion procedure. Now, let's proceed to the next step of this process.

Writing .188 as a fraction

Now, when we are converting a decimal number into its corresponding fraction, we are definitely looking for a fraction in its simplest form. Here, the fraction that we have got after the completion of the first step is 188/1000. As we can see, this fraction cannot be considered as a fraction in its simplest form. In order to convert 188/1000 into a fraction in its simplest form, we have to divide the numerator and the denominator by the same number. In this case, we have to divide this fraction's numerator and denominator by 4. This will give us the fraction 47/250. This is the simplest form of this fraction and hence can be considered as the right answer. Here, we have to keep in mind that we need to perform the division until we arrive at the required fraction which is present in its simplest form. In this case, we have got the required answer after the first round of division. But, sometimes we might even have to perform three or four rounds of division in order to arrive at a fraction which is present in its simplest form.

Conclusion

Thus, from our discussion of the topic, it can be concluded that if we write .188 as a fraction, we will get 47/250.

Here, we have discussed the process of conversion of this decimal number into its corresponding fraction in detail. The entire process can be broadly divided into two steps. The first one is the removal of the decimal point and the second one is the conversion of the obtained fraction into a fraction in its simplest form. Thus, this discussion can be considered as highly beneficial for those students who might lack a clear idea about these conversions. It will provide them all the essential details regarding how to proceed with these questions.
